**Regulatory Framework Plan: 2025 to 2028 posted to the Canada Energy
Regulator website**

The purpose of this letter is to provide you with information on recent Canada Energy Regulator (**CER**) improvements and more importantly, to seek your input and feedback on the regulatory improvement priorities identified in our Regulatory Framework Plan.

Our regulatory framework provides the structure around which all our regulatory activities take place. It includes the system of laws, regulatory documents, and guidance materials we use to regulate the parts of Canada's energy industry that fall within our scope of authority. It is important to us that information on our regulatory framework is accessible to all those who are affected by it, and the purpose of our regulatory requirements is clear.

We have published the [Regulatory Framework Plan: 2025 to 2028](#) and welcome your input on its content.

Every year, the Regulatory Framework Plan is prepared; setting out the regulations, regulatory documents, policies and guidance that we plan to develop or amend over a three-year period, including the projected timelines.

We invite you to read the enclosed Regulatory Framework Plan.

Your input is very important to us, and we welcome any feedback you might have on aspects of our regulatory framework that could be made clearer, as well as the contents of the current Regulatory Framework Plan.

Please contact regulatory.framework@cer-rec.gc.ca.

Yours sincerely,

Signed by

Suchaet Bhardwaj
Director, Regulatory Policy
